

1. Sprint 1 Planning

Task ID/Title: Sprint 1 Planning

Purpose of AI Use: Used AI to get ideas on how to organize the Sprint 1 planning.

Chat Link or Prompt/Response:

Prompt: What do I need to include here for the Sprint 1 planning?

Response: You need to create a **Sprint 1 Planning** document. Based on the requirement, it needs 5 things:

- **Backlog** — what needs to be done during Sprint 1
- **Priorities** — which tasks are high, medium, or low priority
- **Risks** — possible problems your team could run into
- **Effort estimation** — how much work each task requires (Small/Medium/Large)
- **Team capacity** — your team members and how the work will be divided

You can create a file called Sprint1_Planning.md and organize it with those five sections.

AI-Suggested Content: Suggested the main sections to include in the Sprint 1 planning.

Validation: Compared the suggestions with the Sprint 1 requirements and our team plan.

Decision: Modified before use.

Reflection: AI helped me understand and organize the Sprint 1 planning.

Responsible Person: Georges Mourad 40258082

2. GitHub Issues and Tasks

Task ID/Title: GitHub Issues and Task Breakdown

Purpose of AI Use: Used AI to get ideas for breaking down the user stories into tasks.

Chat Link or Prompt/Response:

Prompt: How should I organize our user stories as GitHub Issues and what should I include in each one?

Response: Create one **GitHub Issue** for each user story. For each issue, you can include:

- **User Story** — add the original user story in the description
- **Tasks** — break down the user story into smaller tasks using checkboxes
- **Label** — use a label such as enhancement
- **Type** — set it as Feature
- **Priority** — choose High, Medium, or Low
- **Effort** — estimate the amount of work needed
- **Assignee** — assign the task to the team member responsible

AI-Suggested Content: Suggested how to organize the user stories as GitHub Issues, including tasks, labels, types, priorities, effort levels and assignees.

Validation: Compared the suggestions with the user stories and project requirements.

Decision: Modified before use.

Reflection: AI helped me organize the user stories and tasks in GitHub.

Responsible Person: Georges Mourad 40258082

3. Team Process Definition

Task ID/Title: Team Process Definition

Purpose of AI Use: Used AI to get ideas on what to include in the Team Process Definition.

Chat Link or Prompt/Response:

Prompt: What should I include in our Team Process Definition based on the Sprint 1 requirements?

Response: Your **Team Process Definition** should include:

- **Workflow** — how the team organizes and completes tasks
- **Branching Strategy** — how branches are used when working on features
- **Pull Request Process** — how changes are reviewed before merging
- **Code Review Process** — how team members review and test changes
- **Definition of Ready** — when a task is ready to be worked on
- **Definition of Done** — when a task is considered completed

The document should describe these sections based on how your team actually works.

AI-Suggested Content: Suggested the main sections to include in the Team Process Definition.

Validation: Compared the suggestions with the Sprint 1 requirements and our team process.

Decision: Modified before use.

Reflection: AI helped me understand what to include in the Team Process Definition.
